Application No. 10/786,814

This listing of claims will replace all prior versions, and listings, of claims in the application:

Listing of Claims

1. (Currently amended) A two compartment bag comprising, in combination:
a generally flat, rectangular bottom panel[,] with connected side edges;
first, second, third, and fourth adjacent flexible material side wall panels extending from and affixed seriatim to the side edges of the bottom panel to form an enclosure with an open top, having said first second, third and fourth wall panels foldable to form first and second separate parallel top closures, said second side wall panel generally parallel to and spaced from the fourth side wall panel, said closures parallel to the second and fourth opposed side wall panels; for the bag in combination with a connecting top panel segment comprised of an extension between of the first and third panels joining the first and third opposed side wall panels, said first and third side wall panels forming the opposite ends of said parallel top first and second closures, and
an internal panel generally parallel to the second and fourth side wall panels and extending between from the connecting top panel segment[,] to the inside of the first and third wall panels and to the bottom panel to form two separate internal sections of the bag enclosure, said internal panel comprised of continuous flexible material extension of the top panel segment; said second and fourth panels, connected respectively by a fastener mechanisms to the connecting first panel, top panel segment and third panel to form said first and second closures a first flexible opening bounded by the first panel, second panel, third panel and top segment and a second flexible opening bounded by the first panel, fourth panel, third panel and top segment.
2. (Currently amended) The bag of claim 1 wherein the internal panel is attached to the bottom wall ~~and side walls~~ by releasable fastening devices.
3. (Original) The bag of claim 1 including a shoulder strap having opposite ends with fabric loops, a carabineer attached to each loop, and two fabric loops attached to the connecting segment, said carabineers attached to the fabric loops.
4. (New) A two compartment bag comprising in combination;
a generally flat, rectangular bottom panel with side edges;
a first flexible material, foldable panel assembly; and
